

Deploying KDE for Humanity

(A distro tale)

Helio Chissini de Castro

About the person who talks

**A little background
about what brings me
here to do this talk !**

Flying Solo

- KDE suffered resistance in most environments and was mostly a every day fight
- We always forced to know how to interact and deal with several non KDE software
- You need to adapt

Be humble and talk each other

- You're not alone
- Look and talk with competition is not an issue, is a win cooperation situation
- Talking open about your issues is not a shame, is a way to say we are open to any help
- Offer your wizardry as well

Be stubborn and focused

- You're not alone (again)
- From users to contributors to management, they have ideas
- They think that his ideas are righth...
- ...ever
- So be stubborn and try to keep this as reasonable possible otherwise you end up in an unfinished work

You will be annoying

- Want know why theres a upstream versus downstream issues ?
- Downstream always been pressured to have stable things with bleeding edge
- Upstream has no relation to downstream, so feel no reason to help fixing sometimes

Put KDE tech on the test

- Building an entire distro based on KDE having minimal resources and intermittent energy and internet ?
- You need a flexible environment
- You need to be able to accept modifications on the fly
- KDE wins ?

Regarding the new world

- Desktop computers are not the only reality anymore
- KDE provides the approaches for new medias. Is it right ?
- The dirty story about interfaces
- Why KDE tech is going to the right path

Thank you !!!
